(54) Title: METHOD TO SECURE THE EXECUTION OF A PROGRAM AGAINST ATTACKS BY RADIATION OR OTHER

(57) Abstract: The method according to this invention con-  
cerns a method to secure the execution of a program stored in an  
electronic assembly comprising information processing means  
and information storage means. The method consists in check-  
ing the execution of each instruction of at least a portion of  
said program by performing during the execution of said por-  
tion a calculation using predetermined values, depending on or  
associated with each of said instructions and by comparing the  
result obtained with a precalculated value. This invention also  
concerns the electronic module in which said method is imple-  
mented and the card comprising said module.
